CYBERSECURITY

SECURITY FIRST

BRACE AUTOMOTIVE DEVELOPMENT

In an era of continuous technological advancement, cybersecurity is no longer an optional consideration, but an absolute requirement. The automotive world faces the challenge of ensuring its customers' security and privacy in an ever-growing digital landscape. Enlisting expert advice and professional support is not only wise, but crucial to successfully addressing these challenges.

EXPERTISE AND EXPERIENCE

BRACE provides up-to-date expertise and specific experience for numerous clients.

Ensuring cybersecurity in the automotive sector requires a deep understanding of both automotive technology and digital security.

Specialized cybersecurity experts like BRACE, can conduct a thorough risk assessment, identify vulnerabilities and propose appropriate measures to neutralize potential threats.

COLLABORATION IN CYBERSECURITY

The complexity of modern vehicles and the constantly evolving nature of cyberattacks emphasize the need for collaboration between automakers, technology providers and cybersecurity experts.

A joint effort is essential to erect barriers against threats and ensure the safety of road users.

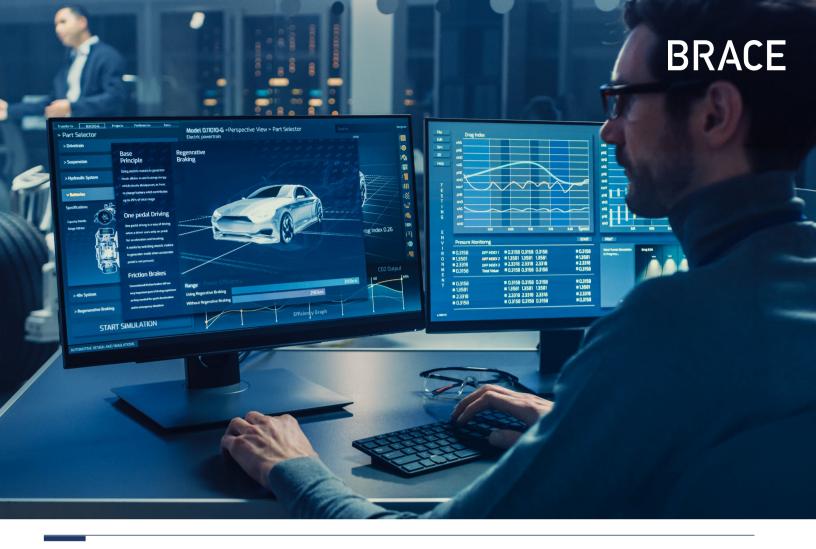

Our insights help design and implement effective security measures that protect vehicles and vehicle systems from potential outside attacks.

WHY CHOOSE BRACE?

With a deep understanding of both automotive development and cybersecurity, BRACE is able to provide a unique bridge between technological advances and protection against cyber

We strive to continue to enable innovation in the automotive world by actively identifying and managing risks. Our experience allows us to advise and support all parties across the supply chain (OEM, Tier 1, Tier 2, Tier 3) to design products and/or systems more robustly.

BRACE automotive has years of experience in the automotive industry and provides cybersecurity consultancy, services and training.

If you would like to learn more about our Cybersecurity services go to our website and read more about our services in the areas of:

- **Security Testing**
- **Red Teaming**
- Legal regulations
- Safety & Security
- Training and Education

SECURITY TESTING

Security Testing focuses on identifying vulnerabilities in software, applications and networks. This is done through penetration testing, vulnerability scans and code audits. The goal is to detect potential security vulnerabilities before they are exploited by malicious parties.

RED TEAMING

Red teaming goes beyond simply identifying vulnerabilities. It simulates actual attacks to evaluate and improve an organisation's response and security measures.

ABOUT BRACE

BRACE has over 20 years of experience in the automotive industry and specializes in automotive development with a focus on providing advice, services and training in the field of functional safety and cybersecurity. The multidisciplinary nature of our market-oriented approach makes BRACE a valuable development partner. This collaboration strengthens our clients' innovation processes.
